

Challenge: Driver comes in complaining that the dash gauges are “sweeping”

Possible Causes:

1. Service Bulletin #S05JH has not been performed
2. Lost communication to the engine

Solution: First check to assure that Service Bulletin #S05JH has been performed. If it has and the Driver is still complaining, then prior to the driver shutting the unit down check the dash diagnostics to see if there are any codes. Remember: the unit self checks itself so if it is restarted, there may be no active code.

If there is a communication to the engine showing, then check the J1939 harness and pay special attention to where the harness runs over the rear of the engine at/near the valve cover and the connections. There may possibly be either a loose connection or a shorting issue.
