SERVICE NOTICE FOR CV & A3 CHASSIS (w/air brakes)

Buses Affected: All buses with Blue Bird® chassis CV & A3, with air brakes, and a production date from January 2008 to April 2008.

Notice: The quick release that was previously mounted on the engine crossmember has been removed. All you will see is a brass "T" type fitting as shown in the two photos below.

Blue Bird has removed the quick release and is now using the Bendix® M-32Q™ pressure modulating valve. This new valve can release the air through these and eliminate the need for the quick release valve.

If you have any questions please call your Yancey Bus representative or the service manager at your nearest Yancey Bus service facility.
