

VISIONLINK® FEATURE HIGHLIGHT: FLUID ANALYSIS (POWERED BY S-O-SSM SERVICES)

+ • IMPROVED FLUID ANALYSIS FEATURES IN VISIONLINK

S-O-SSM Services is a key enabler of equipment management, turning fluid analysis data into valuable information by identifying excessive wear or contaminated fluids and helping to reduce total cost of ownership by enabling repair before failure. Participating in fluid analysis services through a local Cat® Dealer is even easier with enhanced functionality within VisionLink®.

VisionLink® Fluid Analysis, powered by S-O-SSM Services, replaces legacy S-O-SSM Services Web, allowing customers to register & track fluid samples, view & compare results, and to configure & receive notifications and reports. Additionally, the 'needs review' feature allows for customer users to record actions taken in response to fluid analysis results.

+ KEY BENEFITS

- 1 **No need to leave VisionLink.** Sample results with details & graphs can be viewed directly in VisionLink, which means no jumping between different solutions.
- 2 **Improve interpretation quality.** With the ability to register a fluid sample using a dealer provided sample number or QR code, users can save time & potentially reduce the risk of unidentified samples. To make things easier, the VisionLink mobile app allows for QR code scanning.
- 3 **Track sample progress.** Customers can stay informed as their sample progresses through the lab (Submitted, Received in Lab, In Analysis, & Results).

+ • HOW CAN A CUSTOMER USE THIS?

*If you don't see a sample that you believe should be accounted for, please reach out to Cat® Digital Support.
